PRESS RELEASE

Introducing Crossover: A Community-Powered Initiative to Fuel a New Kind of Crypto Coin Ecosystem

August, 1, 2025:

Taking the decentralized movement to new heights, the Crossover Coin is about to make waves in the blockchain world by creating a community-driven crypto initiative designed to give everyday users a stake in validator infrastructure — and the rewards that come with it.

Crossover isn't just another coin. It's the first crowdsourced initiative which aims to purchase and operate Solana validators, using the validator's profits to buy back Crossover coins, creating sustained demand and long-term value for token holders.

Solana processes more than 32 million transactions daily. Recent blockchain data shows Solana has seen a 400% transaction volume increase in 2025 . Those transactions account for more than $1.8 million in fees every 24 hours. The recent Pump.fun Initial Coin Offering (ICO) raised $500 million and sold out in minutes. Institutional inflows into Solana have hit $78 million, signaling strong interest among larger investors. Solana's active addresses are nearing 16 million daily and steady netflows indicate confidence from both retail and institutional investors. The network relies on increasing numbers of validators to allow for its future growth. With undeniable momentum swinging behind the Solana blockchain and a successful seed round of financing, Crossover is ready to take its next steps and create the bridge between collective ownership and sustainable crypto income. Allowing investors to own the Chain and reap the Rewards.

This isn't another meme coin.

"This is the next evolution of community-owned infrastructure. Instead of chasing pump-and-dump coins, users can co-own a piece of the blockchain's core infrastructure—and watch the value of their coin grow alongside it."

How It Works

1. Raise Funds: Community members contribute to fund a Solana validator.

2. Buy Validator: The validator is launched and managed with full transparency.

3. Earn Profits: Validator rewards are tracked and published live.

4. Buyback Model: Profits are used to purchase $CROSSOVR on the open market—creating constant demand. As investment allows, more validators will be brought online further fueling value for Crossover holders.

5. Launch of a second coin (C-series / White Chip offering) to bolster fuel funding for new validators. Details to follow.

Value Flywheel: Real Utility, Real Demand

Crossover's unique "buyback loop" ensures that every validator reward translates into increased demand for the coin. As more validators are added, buybacks increase—fueling exponential growth and giving holders a reason to "HODL".

This model provides real economic utility and sustainability in contrast to speculative-only tokenomics. It offers:

• A transparent reward cycle

• Live validator performance tracking

• A future DAO voting mechanism

Community-Led. Validator-Powered.

With early momentum building across X, Discord, and Telegram, the Crossover community is already embracing the slogan:

"Own the Chain. Reap the Rewards."

In an ecosystem often criticized for being top-down, Crossover puts power and profit back in the hands of the people.

What's Next

Crossover is currently preparing for its official launch on September 1, 2025, with a live dashboard, community airdrops, and staking features on the horizon. A waitlist is now open for users who want early access to validator shares, exclusive NFTs, staking rewards and governance privileges.
