Crossover Secures First Solana Validator Following Blockbuster Presale

Crossover, the community-powered initiative reinventing how Solana validators are funded, has officially secured its first validator node thanks to the overwhelming success of its ongoing presale.

The Crossover team has secured a validator and is now in the process of onboarding that validator to Solana's testnet, where it will undergo rigorous performance benchmarks over the next six months. Once approved for mainnet, the validator will begin collecting real network fees — marking the start of a new era where community-powered infrastructure drives blockchain growth.

"This is no longer just an idea. Crossover has officially launched, and with the strength of our growing community, we're proving that validators — the backbone of Solana — can be owned and fueled by everyday people, not just large investors."

With momentum still building, Crossover will continue raising funds through its presale, with the goal of securing a second and possibly third validator before November 1. On that date, Crossover plans to list its token on major crypto exchanges, giving early supporters the opportunity to trade and expand their stake.

The project's presale remains live at <https://crossovr.io/presale>, offering early contributors staking rewards of 10% over six months or 15% over twelve months..

Crossover's mission is simple:

- ✓ Build real blockchain infrastructure.
- ✓ Reward the community directly.
- ✓ Create sustainable growth without speculation or hype.

About Crossover

Crossover is a community-driven project building a global network of Solana validators, with profits shared back to its contributors. By leveraging a multi-stage token model and transparent validator operations, Crossover offers a sustainable and rewarding way to participate in blockchain growth.
